To Whom It May Concern:

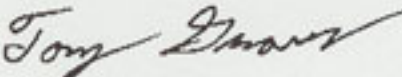

My name is Tony Graves. I teach Survey of Technology Education and Modular Technology at Tates Creek Middle School in Lexington, KY. I had been having quite a bit of problems with theft and damage of equipment, so started doing research on the internet looking for ways to solve these problems. I came across several classroom management techniques and none worked. I decided that I needed to invest in some type of equipment such as a surveillance system. I researched numerous companies and products and most were either insufficient, or extremely pricey. I finally happened across the DTT web site and thought I'd give them a call.

Gary Seebach was extremely helpful and actually came to my classroom with a working model of their product to show me how it worked and how to use it. We discussed the features and idiosyncrasies of the product, as well as its applications. This product can do way more than I need it to, so Gary helped me to streamline what I need to make it more affordable. After all was said and done, I ended up with a system that not only is far superior to the other three systems I had narrowed my choices down to, but also was a little over half the cost of the next cheapest system.

Since its inception, damage to equipment and theft has dropped drastically. Even though it wasn't the intended purpose, malfeasance of all kinds has diminished drastically. Every time a student witnesses someone else do something "bad," they start yelling, "check the tapes! Check the tapes!"

All in all, this product is wonderful. It is truly a life saver. I feel better knowing that I have eyes watching my lab and students at all times, and the students feel safer knowing that they won't be accused of doing something they didn't do. Thanks DTT!

Sincerely,

  
Tony Graves
